

COLLEZIONE **KOMPO**

CATALOGO **2023**

FIVEA presenta la nuova collezione **KOMPO**.

L'ambiente bagno prende forma e si colora grazie alla molteplicità di finiture disponibili, dai laccati ai laminati, dai decorativi al fenix. L'ampia modularità consente di progettare l'arredo bagno per ambienti di diverse dimensioni con una grande possibilità di personalizzazione dello spazio, dando vita ad ambienti esclusivi dalla diversa atmosfera, ognuno può creare l'ambiente nel quale sentirsi a proprio agio. Quanto proposto in questo catalogo non è che una piccola parte delle infinite possibilità. Il tutto senza perdere di vista la qualità dei materiali, l'attenzione alle finiture e alla tecnologia degli accessori.

FIVEA presents the new KOMPO collection

The bathroom space is shaped and coloured by the multiple finishes available: lacquered, laminates, but also fenix and decorative. The wide modularity makes it possible to design bathroom furniture for rooms of different sizes with a great possibility of customizing the space, giving life to exclusive environments with unique atmosphere, everyone can create the space in which they feel comfortable. What is presented in the catalog is only a small part of the endless possibilities, without losing the quality of materials and the attention to finishes and technology of accessories.

FASCIA 1

FASCIA 2

FASCIA 3

FENIX: FENIX NTM® è un materiale innovativo, super opaco e soft touch, creato per l'interior design. Coniuga raffinate soluzioni estetiche con prestazioni tecnologiche all'avanguardia. La parte esteriore di FENIX NTM® è ottenuta con l'ausilio di nanotecnologie ed è caratterizzata da una superficie trattata con resine acriliche di nuova generazione, che dotano questo nuovo materiale di proprietà fuori dal comune, aprendo una strada inedita nel mondo dell'interior design. Con una bassa riflessione della luce, la sua superficie è estremamente opaca, anti impronte e piacevolmente soft touch. Grazie all'uso della nanotecnologia, FENIX NTM® si rigenera da eventuali micrograffi superficiali grazie alla termoriparabilità, come sottolineato anche dalla scelta del suo nome. FENIX NTM® è inoltre fortemente resistente ai graffi, all'abrasione, allo strofinamento e al calore secco. Resiste molto bene agli urti, ai solventi acidi e ai reagenti di uso domestico. Ha un'alta attività di abbattimento della carica batterica che rende la sua superficie igienica e facile da pulire. È anche idrorepellente e antimuffa.

CERAMICA: La produzione della ceramica si basa sempre su materie prime naturali, che garantiscono che il materiale ceramico risulti estremamente duro e resistente. La ceramica grazie al suo smalto liscio è di facile manutenzione, soddisfa i più elevati requisiti igienici; acidi chimici, detergenti aggressivi o sali acidi non possono intaccare il materiale. L'autenticità della luce, la varietà e la piacevole sensazione tattile rendono la ceramica il materiale più adatto per realizzare oggetti sanitari di gran pregio.

LACCATINO UV: La laccatura con la tecnologia UV, è realizzata su base acrilica per un'elevata stabilità nel tempo per superficie e colore. La finitura superficiale lucida ha elevate caratteristiche di resistenza ai graffi e usura unite ad un'ottima facilità di pulizia, ed un minore ingiallimento nel tempo.

LAMINATO: È costituito internamente da strati di fibre cellulosiche impregnanti con resine fenoliche e superficialmente da uno o più strati di fibre cellulosiche con funzione estetica, impregnati con resine termoindurenti e legati insieme da un processo ad alta pressione. Lo Stratificato HPL è un materiale di eccellente qualità per le sue potenzialità funzionali ed estetiche. Le sue caratteristiche di resistenza all'usura, l'igienicità, ne fanno il materiale ideale per la realizzazione di sistemi d'arredo. Ideale inoltre per tutte le applicazioni dove sia necessario abbinare resistenza e design, lo Stratificato HPL, disponibile in varie tipologie, è il materiale qualitativamente più affidabile ed il più ricco di funzionalità estetiche anche per la creazione di complementi di design contemporaneo.

MINERALMARMO®: è un materiale composto da cariche minerali naturali (carbonati di calcio e triidrossidi di alluminio) e resina poliestere. Lo smalto tecnico lucido che riveste la superficie del materiale è di tipo poliestere acrilato, caratterizzato da ottime proprietà. L'estetica e le caratteristiche meccaniche e chimiche rendono questo materiale adatto all'arredobagno.

SOLID: È un materiale composito realizzato con 2/3 di idrati di alluminio, mescolati magistralmente con resine poliestere modificate con monomeri acrilici dalle alte prestazioni chimiche e meccaniche. Tutto questo porta ad avere un materiale omogeneo e uniforme in tutto lo spessore, grazie anche all'attenta procedura di realizzazione industriale che può, per certi versi, definirsi ancora artigianale,

dalla scrupolosità impiegata e la minuziosa attenzione per i particolari.

Le principali caratteristiche di questo prodotto sono la compattezza, la resistenza agli agenti chimici e/o solventi e la resistenza al graffio; inoltre, data l'uniformità in tutto lo spessore, eventuali danneggiamenti possono essere facilmente rimossi utilizzando una spugnetta abrasiva e rinnovare così la superficie.

OCRITECH®: L'Ocritch® è un materiale innovativo di puro acrilico colato, senza cariche minerali.

I vantaggi dell'Ocritch, sono molteplici a partire dalla resistenza agli urti, al calore (max. 80°) ai vari tipi di acidi diluiti, sostanze alcaline e dalla facile pulizia; passando per la stabilità del colore nel tempo – non presenterà nessuna variazione di tono essendo un materiale invulnerabile ai raggi UV. Tra le sue peculiarità spicca la sua resistenza all'assorbimento di alcuni prodotti cosmetici e di bellezza, tipici nell'utilizzo come ad esempio la tintura per capelli.

FENIX: FENIX NTM® is an innovative material, ultra-matt and soft touch, created for interior design. It combines refined aesthetic solutions with cutting-edge technological performance. The external part of FENIX NTM® is obtained with the aid of nanotechnologies and is characterized by a new generation of acrylic resins treated surface, which give this new material a unique feature, opening a new path in the world of interior design. With a low reflection of light, its surface is extremely matt, fingerprint resistant and pleasantly soft touch. Thanks to the use of nanotechnology, FENIX NTM® is able to regenerate itself from possible superficial micro-scratches thanks to its thermal repairability, as underlined by the choice of its name. FENIX NTM® is also highly resistant to scratches, abrasion, rubbing and dry heat. It is very resistant to shocks, acid solvents and household reagents. It has a high activity of reducing the bacterial load that makes its surface hygienic and easy to clean. It is also water-repellent and anti-mould.

CERAMICS: The production of ceramics is always based on natural raw materials, which guarantee an extremely hard and resistant ceramic material. The ceramic, thanks to its smooth polish, is easy to clean, it meets the highest hygienic requirements; chemical acids, aggressive detergents or acid salts cannot affect the material. The authenticity of the light, the variety and the pleasant tactile sensation make ceramics the most suitable material for making high-quality sanitary items.

UV LACQUERANCE: The lacquering with UV technology, is made on acrylic base for a high stability over time for surface and color. The glossy surface treatment has high resistance to scratches and deterioration combined with excellent ease of cleaning and less yellowing over time.

LAMINATED: It is made up internally of cellulose fibres treated with phenolic resins and on the surface it is made up of one or more layers of cellulose fibres with an aesthetic function, treated with thermosetting resins and bound together by a high pressure process. The HPL layer is a material of excellent quality for its functional and aesthetic potential. Its characteristics of resistance against deterioration and hygiene make it the ideal material for the creation of interior design systems. It is also perfect for all applications that require a combination of strength and design. The HPL layer, available in various models, is the most reliable material in terms of quality and the richest in aesthetic functionality, even for the creation of contemporary design elements.

MINERALMARMO®: is composed of natural mineral charges (calcium carbonate and aluminium trihydrates) and polyester resin. The glossy technical enamel covering the material surface is of the polyester acrylate type of excellent properties. The aesthetic, mechanical and chemical properties make this material suitable for bathroom furniture applications.

SOLID: A composite material made up of 2/3 aluminium hydrates, masterfully blended with polyester resins modified with chemical and mechanical high-performance acrylic monomers. All this yields a material that is homogeneous and uniform throughout its thickness, thanks to an extremely accurate industrial production process that may be, in some ways, still be defined as craft for its thoroughness and meticulous attention to detail. The main characteristics of this product are its compactness, resistance to chemical agents and/or solvents and scratch resistance. Moreover, being uniform throughout its thickness, any kind of damage can be easily removed by rubbing the surface with a scouring sponge to renew the surface.

OCRITECH®: Ocritech® is an acrylic based material, known for its unique features as lightness, strength and pleasant touch. Due to its easy sanitization, it is ideal for application in the bathroom. Ocritech® is versatile and ideal for installation because, it is light and therefore easy to move, as well as easy to work on site using standard tools. Both in its thermoformed or built applications it always maintains the physical and aesthetic characteristics required by the customer. Thanks to these qualities Ocritech® has been used for over 10 years for the realization of washbasins, bathtubs, shower trays, shower columns and other bathroom accessories: a real ally for the realization of projects with democratic design.
