LAMINATI HPL | Fascia 1

LAMINATI HPL | Fascia 2

LAMINATI HPL | Fascia 3

FENIX: FENIX NTM® è un materiale innovativo, super opaco e soft touch, creato per l’interior design. Coniuga raffinate soluzioni estetiche con prestazioni tecnologiche all'avanguardia. La parte esteriore di FENIX NTM® è ottenuta con l'ausilio di nanotecnologie ed è caratterizzata da una superfcie trattata con resine acriliche di nuova generazione, che dotano questo nuovo materiale di proprietà fuori dal comune, aprendo una strada inedita nel mondo dell’interior design. Con una bassa riflessione della luce, la sua superfcie è estremamente opaca, anti impronte e piacevolmente soft touch. Grazie all'uso della nanotecnologia, FENIX NTM® si rigenera da eventuali micrograffi superficiali grazie alla termoriparabilità, come sottolineato anche dalla scelta del suo nome. FENIX NTM® è inoltre fortemente resistente ai graffi, all'abrasione, allo strofinamento e al calore secco. Resiste molto bene agli urti, ai solventi acidi e ai reagenti di uso domestico. Ha un'alta attività di abbattimento della carica batterica che rende la sua superfcie igienica e facile da pulire. É anche idrorepellente e antimuffa.

CERAMICA: La produzione della ceramica si basa sempre su materie prime naturali, che garantiscono che il materiale ceramico risulti estremamente duro e resistente. La ceramica grazie al suo smalto liscio è di facile manutenzione, soddisfa i più elevati requisiti igienici; acidi chimici, detersigenti aggressivi o sali acidi non possono intaccare il materiale. L'autenticità della luce, la varietà e la piacevole sensazione tattile rendono la ceramica il materiale più adatto per realizzare oggetti sanitari di gran pregio.

LACCATINO UV: La laccatura con la tecnologia UV, è realizzata su base acrilica per un'elevata stabilità nel tempo per superfcie e colore. La finitura superficiale lucida ha elevate caratteristiche di resistenza ai graffi e usura unite ad un'ottima facilità di pulizia, ed un minore ingiallimento nel tempo.

LAMINATO: È costituito internamente da strati di fibre cellulosiche impregnanti con resine fenoliche e superficialmente da uno o più strati di fibre cellulosiche con funzione estetica, impregnati con resine termoindurenti e legati insieme da un processo ad alta pressione Lo Stratificato HPL è un materiale di eccellente qualità per le sue potenzialità funzionali ed estetiche. Le sue caratteristiche di resistenza all'usura, l'igienicità, ne fanno il materiale ideale per la realizzazione di sistemi d'arredo. Ideale inoltre per tutte le applicazioni dove sia necessario abbinare resistenza e design, lo Stratificato HPL, disponibile in varie tipologie, è il materiale qualitativamente più affidabile ed il più ricco di funzionalità estetiche anche per la creazione di complementi di design contemporaneo.

FENIX: FENIX NTM® is an innovative material, ultra-matt and soft touch, created for interior design. It combines refined aesthetic solutions with cutting-edge technological performance. The external part of FENIX NTM® is obtained with the aid of nanotechnologies and is characterized by a new generation of acrylic resins treated surface, which give this new material a unique feature, opening a new path in the world of interior design. With a low reflection of light, its surface is extremely matt, fingerprint resistant and pleasantly soft touch. Thanks to the use of nanotechnology, FENIX NTM® is able to regenerate itself from possible superficial micro-scratches thanks to its thermal repairability, as underlined by the choice of its name. FENIX NTM® is also highly resistant to scratches, abrasion, rubbing and dry heat. It is very resistant to shocks, acid solvents and household reagents. It has a high activity of reducing the bacterial load that makes its surface hygienic and easy to clean. It is also water-repellent and anti-mould.

CERAMICS: The production of ceramics is always based on natural raw materials, which guarantee an extremely hard and resistant ceramic material. The ceramic, thanks to its smooth polish, is easy to clean, it meets the highest hygienic requirements; chemical acids, aggressive detergents or acid salts cannot affect the material. The authenticity of the light, the variety and the pleasant tactile sensation make ceramics the most suitable material for making high-quality sanitary items.

UV LACQUERANCE: The lacquering with UV technology, is made on acrylic base for a high stability over time for surface and color. The glossy surface treatment has high resistance to scratches and deterioration combined with excellent ease of cleaning and less yellowing over time.

LAMINATED: It is made up internally of cellulose fibres treated with phenolic resins and on the surface it is made up of one or more layers of cellulose fibres with an aesthetic function, treated with thermosetting resins and bound together by a high pressure process. The HPL layer is a material of excellent quality for its functional and aesthetic potential. Its characteristics of resistance against deterioration and hygiene make it the ideal material for the creation of interior design systems. It is also perfect for all applications that require a combination of strength and design. The HPL layer, available in various models, is the most reliable material in terms of quality and the richest in aesthetic functionality, even for the creation of contemporary design elements.
